

Diaphragm Valve, Metal

Construction

The GEMÜ 625 2/2-way diaphragm valve has a low maintenance piston actuator which can be controlled by inert gases.

Normally Closed, Normally Open and Double Acting control functions are available. An optical position indicator is integrated as standard.

Features

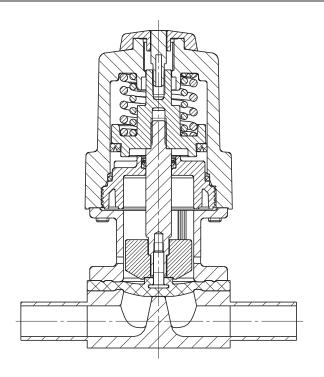

- · Suitable for inert and corrosive* liquid and gaseous media
- · Insensitive to particulate media
- · Valve body and diaphragm available in various materials and designs
- Compact design (ideal when space is at a premium)
- · CIP/SIP cleaning and sterilizing capabilities
- · Versions according to ATEX on request

Advantages

- · Hermetic separation between medium and actuator
- · For sterile applications
- · Optional flow direction
- · Installation for an optimized draining is possible
- · Optional accessories:
 - Stroke limiter
 - Electrical position indicators with microswitches or proximity switches

*see information on working medium on page 2

Sectional drawing

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

| Ten | nperatures | | |
|------|----------------------------|--|--|
| Med | Media temperature | | |
| | FKM (Code 4) | 14 194 °F | |
| | EPDM (Code 13) | 14 212 °F | |
| | EPDM (Code 17) | 14 212 °F | |
| | PTFE/EPDM (Code 54) | 14 212 °F | |
| Ster | rilisation temperature (1) | | |
| | FKM (Code 4) | not applicable | |
| | EPDM (Code 13) | max. 302 °F ⁽²⁾ , max. 60 min per cycle | |
| | EPDM (Code 17) | max. 302 °F (2), max. 180 min per cycle | |
| | PTFE/EPDM (Code 54) | max. 302 °F (2), no time limit per cycle | |

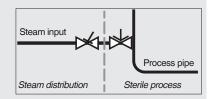

¹ The sterilisation temperature is valid for steam (saturated steam) or superheated water.

PTFE diaphragms can also be used as steam barriers; however, this will reduce their service life.

The maintenance cycles must be adapted accordingly.

GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution.

The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time: A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

Ambient temperature 32 ... 140 °F

| Control medium | |
|--|------------|
| Inert gases | |
| Max. perm. temperature of control medium | 104 °F |
| Filling volume | 1.22 cinch |

| | | Operating pressure | Control pressure [psi] | | psi] |
|----------------|---------|--------------------|------------------------|---------|---------|
| Diaphragm size | DN | [psi] | Stf. 1 | Stf. 2 | Stf. 3 |
| 10 | 10 - 20 | 0 - 90 | 73 - 102 | max. 87 | max. 73 |

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values. Information on operating pressures applied on both sides and for high purity media on request.

² If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time,

the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly. This also applies to PTFE diaphragms exposed to high temperature fluctuations.

Technical data

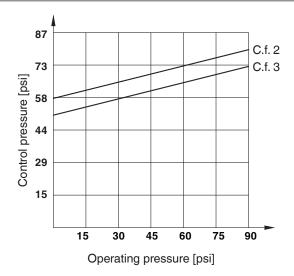

| Cv values [gpm] | | | | | | | |

| Pipe standard | | DIN | EN 10357 series B (formerly DIN 11850 series 1) | EN 10357 series A (formerly DIN 11850 se- ries 2) / DIN 11866 se- ries A | DIN 11850 Series 3 | ASME BPE / DIN 11866 series C | ISO 1127 / EN 10357 series C / DIN 11866 series B |
| Connection code | | 0 | 16 | 17 | 18 | 59 | 60 |
| MG | DN | | | | | | |
| | 10 | - | 2.8 | 2.8 | 2.8 | 2.6 | 3.9 |
| 10 | 15 | 3.9 | 4.4 | 4.4 | 4.4 | 2.6 | 4.7 |
| | 20 | - | - | - | - | 4.4 | - |

MG = diaphragm size

Cv values determined acc. to inlet pressure 75 psi, Δp 1 psi, stainless steel valve body (forged body) and soft elastomer diaphragm. The Cv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Cv values may exceed the tolerance limits of the standard.

The Cv value curve (Cv value dependent on valve stroke) can vary depending on the diaphragm material and duration of use.

Control pressure / operating pressure diagram

The control pressure depending on the prevailing operating pressure, as shown in the diagram, is intended as a guide for operating the system with low wear on the diaphragm.

² Or any other finishing method that meets the Ra value (acc. to ASME BPE).

 $^{^3}$ The smallest possible Ra finish for 1/4" (DN 8) BS 4825 Part 1 and ASME BPE is 15 μ inch.

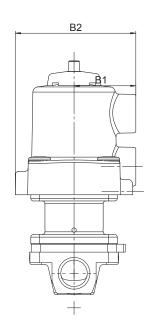

⁴ When using these surfaces, the bodies are marked according to the specifications of ASME BPE. The surfaces are only available for valve bodies which are made of materials (e.g. GEMÜ material codes 40, 41, F4, 44) and use connections (e.g. GEMÜ connection codes 59, 80, 88) according to ASME BPE.

⁵ Not possible for GEMÜ connection code 59, DN 8 and GEMÜ connection code 0, DN 4.
